Henry
Development Career FullStack

September 2022 - November 2022
Udemy
Web programming with JavaScript

ABOUT ME

With more than three years of constant training I have forged a solid academic base and expanded my experience through freelance and internship work. My approach as a Full Stack developer is focused on adopting the latest technologies with specialties in both frontend and backend development. I've created dynamic and responsive web applications using JavaScript, React, NextJs, client-side TypeScript. In the server I have experience using Express, Node.js, relational databases such as MySQL, PostgreSQL and Sequelize as ORM; also Moongose and MongoDB for nonrelational databases. My main objective is to contribute to the success of the company that trusts my skills and gives me the opportunity to strengthen my skills working as a team. Always looking for a new and stable challenge that allows me to continue growing and adding value to innovative projects.

SOFT SKILLS

Effective communication - Empathy - Problem solving - Teamwork - Time management - Ability to learn
